

SRP Repeater Series

Designed to enhance the coverage of two-way radio systems, this cost-effective SRP repeater series uses a combination of ICOM IC-F5012 or IC-F6012 entry-level mobile radios and can be used as a VHF to VHF (SRP-V11), UHF to UHF (SRP-U11), or crossband repeater (SRP-X11). The SRP repeater instantly retransmits received audio without any noticeable delay.

All repeaters in this series provide a stable 25 watt power output, allowing a radio system to be boosted beyond the range of normal Private Mobile Radio (PMR) networks. The SRP Repeater Series comes complete with housing (including 240V PSU) to mount the repeater. The SRP is incredibly flexible and can be installed in a vehicle, an office or any temporary locations.

SRP Repeater Series Specification:

- Extremely rugged, compact and portable
- Available as a VHF, UHF or crossband (VHF and UHF) repeater
- Each unit features two IC-F5012 or IC-F6012 commercial mobile radios
- Price includes tough metal housing and 240V PSU. Can also run on a 12 volt DC supply
- Two antenna working as standard
- Optional duplexer can be fitted
- Vehicle or desk-mountable
- CTCSS signalling
- Supplied with HM-152 fist mic, an optional SM-26 desktop mic is available
- **Great value!**
