

868MHz Wireless Button

ACC-BTN-A8

Commercial long range wireless button with long battery life designed to work with the SMC Gateway V2. Typically used for panic alarms, door control and alerting to radios, smartphones and other systems.

Features

- Based on long range 868MHz
- Battery life in the region of 250,000 activations
- Battery type CR123A, user changeable
- Range up to 2KM*
- Low battery monitor
- Main top "activation" button
- Discrete side "clear/ack" button
- Ultra-fast receive time, typically sub 20ms from activation.
- LED Bi-colour status indicators to display successful or failed activations
- Rugged enclosure
- Size: 80x80x50mm
- Weight: 160g
- Tabletop, fixed and removable wall mount options

*The range quoted is the optimal in direct line of sight without obstacles and in good atmospheric conditions

Note: Each deployment requires a receiver connected to a Gateway. The receiver can support unlimited buttons, is housed in a DIN mount case, and ships complete with antenna and connecting lead to the Gateway V2.
